On behalf of the “Union Argentina de Problemistas de Ajedrez”, we thank composers and judges Michal Hlinka and Lubos Kekely for their participation in the tournament organized to celebrate the 95th anniversary of Prof. Zoilo R. Caputto.

After the deadline (30-10-2018), the Director sent the studies with diagrams and solutions to the judges for their evaluation.

We have received, 69 studies by 31 composers from 19 countries.

REPORT

Special thanks to all the participants and the “Unión Argentina de Problemistas de Ajedrez” for having been appointed as judge of this tournament.

At the same time I would like to thank my friend Ľuboš Kekely for verifying the originality of the studies and for translating the text into the English language.

51 studies were published in this two sections (29 for win and 22 for draw). The competition was average, but prizes are sure to please.

The various themes presented by the composers in the sections Draw and Win, allowed me to extend the amount of distinctions, and in particular, with special nominations

Some studies with defects of different nature or anticipations, were previously reported to the authors through the Director.

I ranked order of honored studies as follows:

A thrilling game from start to finish. The material is reduced and therefore black has a good chance of rescuing. After a strong counterplay (1 ... e5! and 2 ... Nc6!) is not enough 3.Kc3? But after a strong 3.Kd3! it turns out that the win still exists. The pawn e5 falls, but in another fine white game the bishop dominates against the knight and the black must sign surrender

This study is quite complicated, the material is in balance but determines the position factors. The composition has a rich and precise game and a little white hesitation would be used to black save. The white step-by-step tightens the loop while keeping the e-pawn running

In the introduction, White must change three pieces for one of black, with the aim of diverting a rook from the 8th row, and thus start a notable succession of knights promotions. The game is quite complicated, maybe the study is not for all solvers.

Black has a pawn more, but a bad king, so winning the white seems to be real. White promotes a pawn, but it does also black. The material is the same in queen ending. Nevertheless (after 11.Qc6+!) it turns out that all is decided by modest e-pawn

After the introduction the white will find that the win is not enough the seemingly logical 2.Kd5? so he must admit the activation of the black king. The solution to the win lies in the plan with the movement of the king to the d1, but the mine field d2 must be avoided. Then you just need to react correctly to the black 6 ... e4 and after 7.fxe4 do not play 8.fxe4? but 8.f4!

A fun study where black have a chance to draw even with the help of a stalemate threads. The main idea of the study is the difference between 3.g8Q? and 3.b7! The only pity is that the reason why 1.Rg5? is not right has several possible black moves.

After a nice intro, where the black will be after 4...Bxh6 with the illusion of the draw, it will be unpleasant (for the author typical) 5.e5! Then follow the maneuver 6.Bc4! and 7.Bd3+! and in order for the black to miss the bishop will offer quality that is still untouchable. The hope for rescue takes only a short while, because catching of the white rook does not take place for 10.c5!

The effort to turn a - the pawn on the lady does not turn, but it will allow you to move into the draw.

The idea or theme is known in other studies, but in this version there is an interesting introduction, with the addition of a new figure of stalemate at the end of the sequence

Section Thematic: Rook and one minor piece vs Queen

REPORT

Thanks to all the participants and the “Unión Argentina de Problemistas de Ajedrez” for having been appointed as judge of this tournament in the section thematic: rook and minor piece against queen - initial position may contain additional pieces.

Before this tourney took place there were more than 700 studies with this theme composed. Unfortunately in this tourney only 9 thematic studies from 7 authors (P.Arestov, M.García, M.Hlinka, A.Jasik, V.Kalashnikov, O.Pervakov and A.Zhukov) from 4 countries (Argentina, Poland, Russia and Slovakia) were published. Only 3 studies are interesting for me, but without prize. I did not find any unsound study or anticipation.

Here is my ranking:

Oleg Pervakov – (Russia) Honorable Mention

Reciprocal zugzwang in better position against material disadvantage. Mate threats are stronger than queen. If twice white plays wrong, black reaches positional draws
